Orders

Money order, check or cash should accompany your order or we will ship C.O.D. A deposit of 25% of the value of the order is required on all C.O.D. orders.

All prices are subject to change without notice and goods are shipped at prices prevailing at time of delivery.

Sales Policy

Certain items in this price list are shipped PREPAID. See terms under the heading of each section. Any order with a total cost of \$50.00 or over is shipped PREPAID at Alcan Expense. Dupont powders, Hercules powders, and bullet metal excluded unless these items amount to 10% or less of the order value and then we will still ship PREPAID at Alcan Expense. **ALCAN SAVES YOU MONEY** on sales policy.

Alcan Prices

The Alcan Company has always exerted every effort to extend the best possible prices to our customers. You will never find any of our prices that will not save you money. In spite of lower prices all products are guaranteed to satisfy or purchase price will be refunded in full. You cannot buy more economically anywhere.

Shipping

Alton, Illinois is in the transportation center of the entire United States. Our shipments are transferred each night to St. Louis, Mo. for trans-shipment on the fastest one line carrier to most any city in the United States. There are more railroad and truck lines operating out of the St. Louis area to every corner of the United States than from any other section of the country. Because of this location freight shipments are usually fast. This means faster delivery even by Express and Parcel Post as these services use the same rail and truck lines. **We can ship our customers up to 70 pounds of non-explosive merchandise via parcel post.** The Alcan Company makes it a policy to process and pack every order on the same day received. Our delivery cannot be matched. When ordering please specify method of shipment desired.

Complete Stock

The Alcan Company has the largest inventory of ammunition components, reloading tools, and other reloading supplies of any company in the United States. We invite our customers to check this statement by a visit to our plant. You may have read this same statement by one or more of our competitors, however, we are prepared to prove our statement beyond a question to anyone who is interested. This large and specialized stock gives Alcan customers a single source for all needs and speedy delivery.

Life Insurance

In a way our ballistic service is life insurance for Alcan customers as well as being a very convenient service. All of our products are carefully checked and the customer is assured satisfactory results when he purchases his supplies from the Alcan Company. We check the material before you receive it and then test your reloads which have been loaded under different conditions. This is real life insurance.

CHARGE TABLE FOR SHOT SHELLS

This table appears on the next page and was prepared using the finest, most accurate pressure barrels available in conjunction with the latest models of Electronic Chronographs and still the Alcan Company, Inc. cannot assume any liability for damage which may result from the use of this table or from ammunition loaded with components sold by us. This is necessary because we do not have control over the manner in which Alcan primers, wads, and powder are stored, handled, loaded, or used, after leaving our plant, we cannot be responsible by warranty or otherwise for the results or effect of their use. This table is prepared for use with Alcan G209F and Alcan G57F primers. The Magnum type loads should be used in Magnum guns or in the best quality late model guns such as the Ithaca, etc. Safety first: Always check your charge weights and shot weights every 25 shells while loading.

The equivalent velocity is based on the same specifications as those employed in factory loaded shells. Large sizes of shot such as BB or Buck Shot require a 3 percent to 5 percent increase in powder charge with progressive powder types. With other types of powder the increase required is from 1 percent to 3 percent. On shot sizes No. 9 or smaller a proportionate decrease in charge is required. On either the very large sizes or very small sizes of shot it is advisable to have your hand loads tested for velocity and pressure to know your exact results since these types of loads are rather hard to perfect.

On Lyman slug loads do not use "B" wads over the nose of lead slug as is possible for the slug to run over the wad and damage the barrel. Use only a roll type crimp and new tubes are suggested for this load. It is possible to trim folded crimp shells 1/2" and use them, however, the new tube will give more uniform results.

KAPS SCOPE SECTION

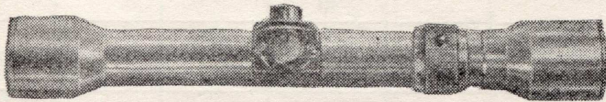

Shipped To Customer At Alcan Expense

KAPS RIFLE SCOPES

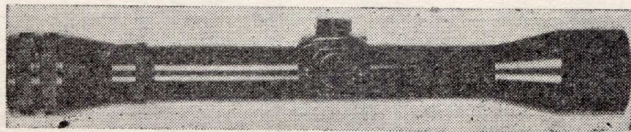

We ask that you compare the specifications on these quality rifle scopes made in famous Wetzlar, Germany. These scopes are guaranteed to satisfy you 100%. Pay close attention to light factor. Check this one item with competitive scopes costing even twice as much and you will be sure to buy a Kaps scope.

Scopes are unaffected by moisture with positive internal windage and elevation adjustments fully enclosed. The scopes can be mounted low. Metal caps cover windage and elevation knobs for protection. Available in four types of reticule. Unless specified standard cross hair type will be furnished.
