HOW TO SELECT A BINOCULAR

In the following pages, descriptions and illustrations are given for over 60 models of binoculars, field and opera glasses. Every binocular, opera, and field glass is a precision instrument having its own purpose and use. There is no all-purpose glass made. When choosing a binocular, primary consideration must be given to its optical capacity. Since most binoculars look alike from the outside, it is the "inside story" which determines the optical quality of the glass, and therewith the price.
. . . and now to some specific questions . . .

What does 6 x 30, 8 x 30, etc., mean?

The first number indicates the magnification. (The number of times the object appears closer to the naked eye.) The lowest magnification adequate for the purpose is usually the best choice. High power glasses do not necessarily increase the sharpness and brightness of the object, unless favorable light conditions exist and no vibrations disturb the viewer. The second number gives the diameter of the objective lens (closest to the object) in millimeters (25mm = 1 inch). The size of this lens determines the light gathering capacity and the brightness of the image. It does not determine the field of view. During daytime, the optical capacity is, in the main, governed by the magnification of the glass. At night, dawn, and dusk, the light gathering capacity becomes the decisive factor.

What is coating?

This is a process whereby a very thin coating of special transparent magnesium flouride is applied to the air-to-glass surfaces of the optics. This increases transparency as much as 50%.

What determines the field of view?

The field of view of a binocular depends partly on the magnification, (the larger the magnification, the smaller becomes the field of view) on the ocular system, and on the size of the prisms. Standard view binoculars have a two lens ocular system — the ocular and the field lens. True wide-angle binoculars have a complex ocular system, consisting of the ocular lens, the field lens, and the wide field lens, in addition to oversize prisms. This system is very costly and therefore, a truly wide field is only found in expensive glasses. (such as Mirapan 600, Supralux 465 or Zeiss Deltrintem).

Individual-or Center Focus, which is best?

There are two types of focusing mechanisms. One is the Center Focusing (CF), whereby the object is brought into focus by first setting the right eyepiece and then bringing the object into focus by adjusting the centerwheel. The other is the Individual Focus (IF) whereby each eye has to be focused separately, as no centerwheel is supplied. The choosing of one or another type is mainly one of a personal preference. Individual Focus usually is preferred for high power glasses, and the military. Hunters, naturalists and the average user, prefer the center focus mechanisms as they are easier to manipulate. As a rule, the individual focus glass is a must where moisture or sea air is around.

Which glass is recommended for what purpose?

For the theater and indoor use: 2½x — 3x opera glasses.

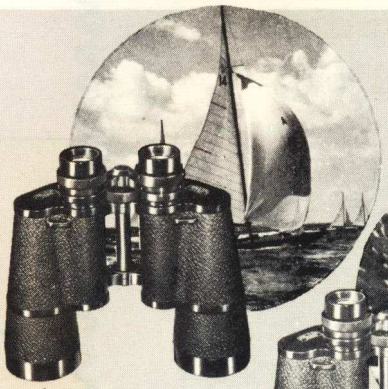

For sporting events: 3x — 4x field glasses.

For Hunting, Outdoors, Mountains: 6 x 30, 8 x 25, 8 x 30, 7 x 35.

(preferably center focus).

For marine and night use: 7 x 50 (preferably individual focus).

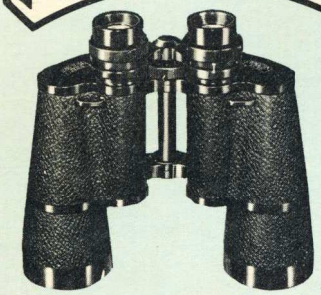

For high mountains, distant viewing: 10 x 50, 15 x 50, 15 x 56, 20 x 56.

SPORTSTER **2.2X**

New and unusual design makes the SPORTOCULAR a wonderful aid to all sportsmen. Compact design makes them inconspicuous to wear, and the low 2.2X magnification permits them to be used for long periods of time without eye fatigue. Has interpupillary adjustment. The coated optics, the wide field of vision of 394 yards per 1000 yards, and the high light transmission of 196, assures maximum visibility, even at dusk. Featherweight, only 2¾ ounces, handsome black finish, in genuine brown cowhide leather case. German.

1¾ & 2-inch VION TELESCOPES

Extremely high-grade French telescopes, precisonmade of solid brass, white enamelled. Top-quality lenses produce a brilliant image, and the eye pieces are interchangeable for both Terrestrial and Celestial observation. These professional instruments are perfect for students of Astronomy and for long distance observation. Can easily be disassembled and carried around in its handsome wood carrying case.

#405 1¾"Coated objective, magnifies Terrestrial objects 25x . . . Celestial objects 50x. **$100.00**

#406 2" Coated objective magnifies Terrestrial objects 35x . . . Celestial objects 60x. **$140.00**

2-inch HY-SCORE ALTAZIMUTH REFRACTOR

The popular-priced HY-SCORE refractor is equipped with slow motion controls for both altitude and azimuth. Standard equipment includes—4x10mm viewfinder with crosshair—3 Huygenian Mittenzwey eyepieces, 83x(6mm), 40x-(12.5mm), 25x(20mm)—rack and pinion mechanism—star diagonal—sunglass —two section tripod and cabinet. Complete instruction book and guarantee card, plus free 130 p. book "Discover the Stars" by Johnson & Adler.
Optical specifications: Focal length 500mm, focal ratio F/10, resolving power 2.4 seconds, coated Frauenhoffer type air space cell, achromatic objective.

#457 HY-SCORE 2" altazimuth refractor, complete **$75.00**

#457-4 125x(4mm) Orthoscopic eyepiece, additional **$15.00**

2.4-inch HY-SCORE ALTAZIMUTH REFRACTOR

2.4" HY-SCORE refractor without slow motion control has 800mm focal length. Furnished with the following Huygenian eyepieces: 88x(9mm), 64x-(12.5mm), 40x(20mm). Resolving power 2 seconds. All other specifications are same as Model 457 above. Includes image erecting system.

#411 HY-SCORE 2.4" altazimuth refractor, complete **$100.00**

TRIPOD EXTENDED

#417

#418

"Discover the stars," a 130 p. book by Johnson & Adler included Free.

2.4-inch COMBINATION TELESCOPES

HY-SCORE 40 power telescope combines astronomical and terrestrial features in one professional-type instrument. The large 2.4" objective lens is achromatic and coated. Field of view, 105 ft. at 1,000 yards. Image erecting system —smooth sliding focus—anti-glare shade—white enamel finish. Complete with 5½ ft. wooden telescoping tripod and adjustable head. Weight 8 lb. Perfect for amateur astronomers, nature study or just "looking around."

#417 HY-SCORE telescope with erecting system, includes free "Discover the Stars," 130 p. book by Johnson & Adler, retail value $1.25 ..... **$42.50**

#418 Same as No. 417, but without erecting system **$37.50**

HY-SCORE Goto 2.4-inch Astronomical Refractors

HY-SCORE GOTO 2.4 Inch ALTAZIMUTH REFRACTOR

This refractor is equipped with slow motion control knobs for altitude and azimuth. Standard equipment includes: 6x17mm removable achromatic viewfinder with exclusive cross-hair and focusing adjustment, 3 coated eyepieces (150x6mm, 90x10mm, 45x20mm), rack and pinion mechanism, star diagonal, erecting prism, sunglass, wooden cabinet, tripod with equipment table, complete instruction booklet, guarantee card plus Book "Discover the Stars", 130 pages of educational and scientific material by Johnson and Adler.

Optical Specifications: Focal length 900mm, Focal ratio F/15, resolving power 1.93 sec.

#451 HY-SCORE GOTO 2.4" Altazimuth Refractor ..... complete **$125.00**

Additional eyepieces available

#451-30 30mm for 30 power **$15.00**
#451-40 40mm for 23 power **$15.00**

Additional equipment available

#451-SPS Sun Projecting Screen **$18.50**

HY-SCORE GOTO refractors are guaranteed to be fully corrected for astigmatism, spherical aberration, coma, and will give correct point of image.

HY-SCORE GOTO 2.4 Inch EQUATORIAL REFRACTOR

This refractor is equipped with a modern equatorial mounting. The declination and R.A. have slow motion control handles. Standard equipment consists of 6x17mm removable achromatic viewfinder with exclusive cross-hair and focusing adjustment, rack and pinion mechanism, 4 coated eyepieces (200x6mm, 133x9mm, 96x12.5mm, 48x25mm), star diagonal, erecting prism, sunglass, wooden cabinet, tripod with equipment table, complete instruction booklet, guarantee card, plus book "Discover the Stars", 130 pages of educational and scientific material by Johnson and Adler.

Optical Specifications: Focal length 1200mm, Focal ratio F/20, resolving power 1.93 sec.

#452 HY-SCORE GOTO 2.4" Equatorial Refractor ..... complete **$225.00**

Additional eyepieces available

#452-30 30mm for 40 power **$15.00**
#452-40 40mm for 30 power **$15.00**

Additional equipment available

#452-SPS Sun Projecting Screen **$18.50**

HY-SCORE Goto 3-inch Astronomical Refractors

HY-SCORE GOTO 3 Inch ALTAZIMUTH REFRACTOR

This altazimuth refractor is equipped with slow motion control handles for altitude and azimuth. Standard equipment includes a 7x22mm removable achromatic viewfinder, with exclusive cross-hair focusing adjustment, 5 coated eye-pieces (217x6mm, 144x9mm, 104x12.5mm, 52x25mm, 72x18mm), rack and pinion mechanism, star diagonal, erecting prism, sunglass, wooden cabinet, tripod with equipment, table, complete instruction booklet, guarantee card plus book "Discover the Stars", 130 pages of educational and scientific material by Johnson and Adler.

Optical Specifications: Focal length 1300mm, Focal ratio F/17, resolving power 1.5 sec.

#453 HY-SCORE GOTO 3" Altazimuth Refractor ..... complete **$265.00**

Additional eyepieces available

#453-30 30mm for 43 power **$15.00**
#453-40 40mm for 32 power **$15.00**

Additional equipment available

#453-SPS Sun Projecting Screen **$18.50**

HY-SCORE GOTO refractors are guaranteed to be fully corrected for astigmatism, spherical aberration, coma, and will give correct point of image.

HY-SCORE GOTO 3 Inch EQUATORIAL REFRACTOR

This refractor is equipped with a worm gear equatorial mounting of modern design. Both the declination and R.A. have slow motion control handles. Standard equipment includes 7x22mm removable achromatic viewfinder with exclusive cross-hair and focusing adjustment, reading circle with vernier scale for declination and R.A., sun projecting screen, rack and pinion mechanism, 5 coated eyepieces (217x6mm, 144x9mm, 104x12.5mm, 52x25mm, 72x18mm), sun, star diagonal, erecting prism, sunglass, wooden cabinet, tripod with equipment table, complete instruction booklet, guarantee card plus book "Discover the Stars", 130 pages of educational and scientific material by Johnson and Adler.

Optical Specifications: Focal length 1300mm, Focal ratio F/17, resolving power 1.5 sec.

#454 HY-SCORE GOTO 3" Equatorial Refractor ..... complete **$435.00**

Additional eyepieces available

#454-30 30mm for 43 power **$15.00**
#454-40 40mm for 32 power **$15.00**

HY-SCORE Goto 4 and 6-inch Astronomical Refractors

HY-SCORE GOTO 6 Inch EQUATORIAL REFRACTOR

with weight driving clock on solid steel base.

The ultimate in fine astronomical refractors, with exacting optical and mechanical accessories. Fine equatorial mount, with declination and R.A. setting circles and slow motion handles. Instruction booklet, guarantee card, and 130 page book by Johnson and Adler is included with each unit.

Optical specifications: Focal length 2250mm, resolving power with respect to double star 0. 77. Light gathering power 460x for naked eye. Faintest discernible star 12.^{m}7. Furnished with 7 coated eyepieces.

#456 HY-SCORE GOTO 6" Equatorial Refractor .....complete **$4975.00**

The 4 inch and 6 inch HY-SCORE GOTO Equatorial Refractors are designed for educational institutions and for advanced students of astronomy.

HY-SCORE GOTO refractors are guaranteed to be fully corrected for astigmatism, spherical aberration, coma, and will give correct point of image.

HY-SCORE GOTO 4 Inch EQUATORIAL REFRACTOR

with electric driving clock movement

This fine professional refractor may be rotated 360° by means of slow motion handles both for declination and R.A. on smooth worm gears for accurate setting on reading circles and vernier scales.

Standard equipment includes 7x22mm achromatic removable view finder, with exclusive cross-hair and focusing adjustment, pinion mechanism, star and sun diagonal, sunglass, sun projector, electric driving clock, wooden cabinet, tripod with equipment table, complete instruction booklet, guarantee card plus book "Discover the Stars", 130 pages of educational and scientific material by Johnson and Adler.

Optical specifications: Focal length 1500mm, resolving power 1.16. Faintest discernible star 11^{m}8. Furnished with 4 coated eyepieces (Mittenzwey Huygens 250x6mm, 120x12.5mm, 60x25mm, Kellner 38x40mm).

#455 HY-SCORE GOTO 4" Equatorial Refractor .....complete **$995.00**
