

The optics of the „Schütz“-Prismatic-Binoculars and Field-Glasses is based on the „Schütz“-Prismatic-System. The course of rays through the optical system, figured in the margin, shows the special advantages.

These advantages of the „Schütz“-Prismatic-Binoculars and Field-Glasses are

- increased intensity of light
- handy form
- small weight
- compact construction
- excellent precision.

We have been making field-glasses for almost 50 years; this enables us to furnish our customers with an instrument of superior quality. Our glasses are made with hard coated optics by a special process giving them the well-known advantages. All models can also be furnished with individual eyepiece adjustment, or as monocular glasses.
